

# #breakfreefromplastic

[Break Free From Plastic](#), the global movement working to stop plastic pollution for good is taking coastal cleanups a step further – by naming the brands most responsible for plastic pollution found on our beaches and beyond.

Our goal? Mobilize massive citizen muscle with a common mission so corporations can no longer frame the issue as one of only consumer responsibility. **Join us!**

**Background:** Corporations like Coca-Cola, PepsiCo, Nestle, Unilever, Starbucks, Procter & Gamble, and McDonald's have a HUGE role to play when it comes to plastic pollution. We are sold coffee, soda, chips, candy, sandwiches, shampoo, soap, and even fruits and vegetables packaged in throwaway plastic.

It's time for these corporations to invest in alternatives and phase out single-use plastic, don't you agree? Here's where we need YOUR help! By categorizing and counting branded plastic packaging during your cleanup efforts, you will help us identify the corporations most responsible.

## **Steps to conduct your brand audit:**

*Time to flex your citizen muscles! We have created a simple online form where you can report the most useful information from these audits. [Click here to fill it out!](#)*

1. First, it is important to **make a waste deposit plan**. Think ahead on how to properly dispose all waste from your clean-up activity. *Note: this is not limited to plastics alone.* For example, recyclable materials should go to material recovery and/or recycling facilities, and biodegradable wastes could be set aside for composting. Waste that cannot be recycled or composted (i.e residual waste) are typically used for the brand audit, hint: these are the brands we want to identify!
2. In any clean-up activity, it is important to have the proper gear to protect yourself and your volunteers. At the minimum, make sure that you **provide protective gloves or tongs that could be used by participants in picking up trash or handling the waste.**
3. After you have identified the location of your clean-up, **specify and measure the size of the designated clean-up area**. The size of the area should be relative to the number of volunteers or participants. Take before and after photos of the site and share them with our community by tagging the location and #breakfreefromplastic!
4. If you have enough time (one full day for the clean-up), **we suggest collecting and sorting all types of waste in your designated clean-up site, not just plastics**. This process is called a waste audit and takes place prior to the brand audit. A waste audit

# #breakfreefromplastic

identifies and quantifies the different components of the waste stream (e.g., organics, recyclable plastics, paper, metals, glass, hazardous waste, residual waste) in a methodical manner. We can utilize this information to understand how much plastic is found in the waste stream compared to other discards. [You can download the Waste Audit Guide and forms here.](#)

5. No time to conduct a waste audit? No problem! **Clean up all the waste in your designated site and separate the plastics from the rest.** Now you are ready to audit the brands with the plastic waste collected. **Categorize the items by brand as you collect them.** Unidentifiable brands can be classified according to package type, which provides insight about problematic materials.
6. **Record your data!** Include the information below about each plastic item. [Download and use this data form](#) and follow these steps:
  - a. Record the name of the brand. (*Hint: This will be the most visible word printed on the item!*)
  - b. Record the manufacturer of that brand. (*Hint: This will be in smaller print in a less obvious place.*) Large manufacturers like Unilever, Nestle, and Procter & Gamble each have hundreds of brands. A quick online search should reveal the manufacturer of your plastic item, if you have trouble finding it on the label.
  - c. Fill in the rest of the information specified in the form.
7. Let's get social! **Take photos of the piles of plastic from each manufacturer and post it to social media.** Tag the manufacturer and **#breakfreefromplastic!**
8. \*\*\*In order for us to use your awesome information, **enter and submit your data! You can upload your photos along with a copy or excel file of your data form which can be found at <https://www.breakfreefromplastic.org/brand-audit-online-form/>.**\*\*\*
9. Clean the audit area carefully and properly, remembering to leave the site cleaner than before you started.
10. If you have the resources to do so, box up the branded items and send it back to the manufacturer. Include a letter to the company describing the purpose of your brand audit and urge them to **#breakfreefromplastic!**

# #breakfreefromplastic

## **What are we doing with this data?**

Through brand audits, #breakfreefromplastic aims to hold polluting corporations accountable, to drive calls for innovations in product packaging and waste management, and to bring people together who want to take action for a future where beach and community clean-ups are a thing of the past.

*Special thanks to #breakfreefromplastic member groups in the Philippines: [Mother Earth Foundation](#), [Global Alliance for Incinerator Alternatives](#), [Greenpeace Southeast Asia](#), [Ecowaste Coalition](#), [Health Care Without Harm - Asia](#), and others, for developing and piloting the brand audit tool as part of their coastal clean-up events in September 2017.*
