Nicola Sturgeon, First Minister of Scotland

Boris Johnson, Prime Minister UK

cc: Rishi Sunak, Chancellor of the Exchequer

28 May 2020

Open letter

No bailouts or government loans for climate and plastic polluter Petroineos

Dear First Minister Nicola Sturgeon, dear Prime Minister Boris Johnson,

We, the undersigned organizations and individuals urge you not to bailout or grant any government loans to Petroineos, the joint venture of PetroChina and Ineos.

According to recent press reports[i], the company - part-owned by billionaire and tax exile Jim Ratcliffe[ii] – seeks £500m in state support for its Grangemouth facilities.

The plastics industry has reaped under-the-radar benefits from the environmentally destructive fracking boom and an oversupply of cheap ethane in the past few years. This surge has been a boon for the plastics industry, which relies on petrochemical manufacturing to turn ethane, a hydrocarbon present in natural gas, into plastics.

Beginning in 2012, chemical companies started aggressively investing in petrochemical plants, pipelines and export facilities focused on tapping the ethane glut, creating further negative implications for human and environmental rights – right at a moment when we desperately try to solve both - the big global plastic and climate crisis.[iii]

According to calculations published by the Center for International Environmental Law (CIEL), full plastic lifecycle emissions (including the extraction of fossil fuels, production, transport, consumption and disposal) alone will generate 56 gigatons of CO₂ by 2050. This corresponds to 10 – 13 per cent of the global carbon budget we have left to stay within a 1.5 ° global warming scenario.

Ineos is the main driving force behind the establishment of an already existing supply chain of fracked US gas that Ineos uses to produce plastics in Europe[iv]. The Ineos Dragon Ships crossing the Atlantic emblazoned with the slogan “Shale Gas for Europe” are leaving more than a toxic legacy in Europe – they are fueling the proliferation of fracking in Pennsylvania, a state that was already struggling with the impacts of oil and gas industry pollution.

The company is also known for publicly opposing green policies and taxes[v] – while at the same time it sees no contradiction in making use of a state loan guarantee[vi] to maintain its otherwise unprofitable

fracking for plastics business model. According to their annual report 2019, Ineos is “*significantly indebted and as of December 31, 2019, had total consolidated loans and borrowings of €6,887.3 million as compared to total equity of €1,528.0 million*” .[vii]

The company has operated chemical plants for nearly two decades, but in that short time, many of its facilities have been bedevilled by environmental problems. Its dozens of manufacturing facilities across Europe have been responsible for releases of toxic chemicals, leaks, fires and explosions that have endangered workers, communities and the environment.[viii] Ineos also has been rated several times the worst air polluter in Scotland.[ix]

Despite being Europe’s largest virgin plastics producer, the company refuses so far to take responsibility for contributing to billions of plastic pellets littering beaches and nature protection zones in the UK[x] and elsewhere.[xi]

Humanity is currently being tested in manifold ways - with manmade global warming as the biggest and most comprehensive existential threat ever faced.

The UK will host in Glasgow, a very crucial climate change conference – possibly paving the way for decades to come.

Bailouts or government loans for companies like PetroIneos, who contribute systemically through their business model to climate change and an increasing plastic pollution of our environment and oceans, cannot be tolerated in these troubled times.

Any support packages for companies must set conditions to protect workers’ rights and high environmental standards, prevent public money from being diverted into the pockets of shareholders, and re-orientate the industry towards meeting the Paris climate agreement.

What we need right now, is swift and radical action for the much-needed shift to 100% sustainable renewable energy, an increase in energy efficiency and a sustainable circular economy that focuses on drastically reducing single-use plastics.

This must be planned for and managed in deep partnership with trade unions, workers and communities to ensure a Just Transition into clean industry that guarantees decent work for those impacted and secure local economies.

Every investment in or support for Ineos would directly fuel the climate and plastics crisis, locking in future instability at a time when investment should be prioritised towards creating secure and sustainable industry.

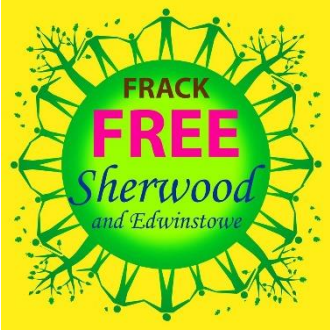

We call on you to side with the climate and the environment, prioritising long term stability for workers through green jobs, and we urge you not to bailout or to grant government loans to PetroIneos

Sincerely,
